### فهرست مهارت‌های تخصصی:

#### Html

Creating and structuring website, using structure tags for dividing website to different parts and using meta tags for SEO

#### Css

Styling websites with the most modern design patterns and using flexbox, grid, box model for partitioning website and media queries for making the web app totally responsive

#### Javascript and Node Js

Making our web application interactive is possible with JS ...posting and getting api's requests and responses are

available with this programming language. We can implement and develop different kinds of projects

## SCSS

scss or sass is a css preprocessor for refactoring css codes, it seems that scss has fixed some bugs in css and today we can optimize our stylesheets by using scss instead of vanilla css.

## Bootstrap 5

Composing and utilizing full responsive components for UI design, easy to use for converting static elements to dynamic features as a css framework

## React

“React is a javascript library for making user interface”, this sentence is written by react website owner. It's component based , reusable, maintainable, manageable and really simplified for creating complicated and simple components which contains UI and logic

## Git / Github

Version Control systems(VCS) such as Git, are used to control and retrieve our source codes. Github is used for saving and sharing our projects and repositories.
